

Validando datas em pt-br com jQuery Validate

Assim:

```
$.validator.addMethod(
    "date",
    function(value, element) {
        var check = false;
        var re = /^\\d{1,2}\\\\d{1,2}\\\\d{4}$/;
        if( re.test(value)){
            var adata = value.split('/');
            var gg = parseInt(adata[0],10);
            var mm = parseInt(adata[1],10);
            var aaaa = parseInt(adata[2],10);
            var xdata = new Date(aaaa,mm-1,gg);
            if ( ( xdata.getFullYear() == aaaa ) && ( xdata.getMonth () == mm - 1 ) && ( xdata.getDate() == gg ) )
                check = true;
            else
                check = false;
        } else
            check = false;
        return this.optional(element) || check;
    },
    "Insira uma data válida"
);
```
